genomic sequenced tags (GST), examining the array, and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way on the magnet copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way can expression of genes or other physiological provocation. Extensive follow-up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is the method of the invention.

CC available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.

CC specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   354 TCCCCCACGGGTAACAGCGTCCCTGTCACATTCTTCTGAATGACATCAGGGATCCCGCCC 413

The invention describes a method of monitoring differential expression of genes in a first Bacilius cell relative to expression of the genes in other Bacilius cells, comprising hybridising labelled nucleic acid probes isolated from Bacilius cells to a substrate containing array of Bacilius gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacilius cells. The method is useful for monitoring global expression of several genes from a bacilius cell, discovering new genes, identifying possible functions of unknown open reading frames and continue copy in which Bacilius cells adapt to changes in culture conditions, in which Bacillus cells adapt to changes in culture conditions, control probes are one open reading frames in expression of genes may be used to provide a representation of the way continuental stress or other physiological provocation. Extensive collow-up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is the method of the invention.

The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression as as any of M. capsulatus genes. The sequences shown in ABQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                   334 CGCCGGTCCATGCAGACACATCCCCCACGGGTAACAGCGTCCCTGTCACATTCTTCTGAA 393

The present sequence encodes enzymes involved in the biosynthesis of exopolysaccharides (EPS). These enzymes are designated EPS1-EPS11. and are encoded by open reading frames eps1. The enzymes are isolated for the objoint reading frames eps1. The proteins are used from Lactobacillus helveticus strain LH59. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldehyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hami-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the end of a chain of sugar residues bonded to the unit, present at the end of a chain of sugar residues bonded to the phosphate-transferase; EPS2, EPS3 and EPS4 are alpha-
phosphate-transferases; EPS5 and EPS6 have homology with a beta-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P-PSDB; AAY54075; AAY54076, AAY54077, AAY54078, AAY54079, AAY54080,

glycosyltransferase; EPS7 has homlogy with an EPS polymerase; EPS8 is a glycosyltransferase, EPS9 catalyses the transfer of phosphofuranose onto the following repetitive unit; EPS10 transports the polysaccharides formed; and EPS11 is involved in the synthesis and export of formed polysaccharides. The EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yoghurt and cheese, e.g. their organoleptic properties and flavour stability.

The present sequence represents the eps operon of Lactobacillus helveticus LH59. The operon contains 11 open reading frames, and encodes enzymes (eps1. eps2, eps1, eps4, eps5, eps6, eps7, eps8, eps9 and eps11) that are involved in the biosynthesis of exopolysaccharides (EPS). The enzymes catalyse the formation of specific intersugar bonds. The enzymes catalyse the formation of specific intersugar bonds forming a bond (in alpha or beta anomeric form) between Cl, carrying the reducing aldehyde group of an activated D-Galp (galactose in pyranose form), and a phosphate group on a lipophilic or proteinaceous primer. The enzymes are used to produce EPS that have antitumor or problotic properties or are used in foodstuffs to improve organoleptic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant enzymes for biosynthesis of exopolysaccharides having e.g. antitumor or problotic properties or useful in fermented milk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encodes AAY43787; the sequence contains 1 stop codon at nucleotides 12867-12869; this CDS is specifically claimed (claim 11)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            P-PSDB; AAY43777, AAX43778, AAX43779, AAX43780, AAX43781, AAX43782,

certings (e.g. proteases and lippases used in washing powder, hydrolytic enzymes used in bleaching). The isolated nucleic acid molecules and vectors are useful in the manufacture of encoded polypeptide, as probes cor isolating homologous sequences (e.g. from other bacteriophage species), as well as for detecting the presence of the bacteriophage a culture of host cells. The polypeptides can be used as a molecular weight marker on SDS-PAGE gels or on molecular sieve gel filtration columns. Because the host organism of the RM378 bacteriophage is a thermophile, the enzymes and proteins of the RM378 bacteriophage are significantly more thermostable than those of other (e.g. mesophilic) bacteriophages, such as the T4 bacteriophage of Escherichia coli. The enhanced stability of the enzymes and proteins of RM378 bacteriophage and allows their use under temperature conditions which would be prohibitive for other enzymes, thus increasing the range of conditions which can be employed not only in DNA research but also in commercial settings.

This invention describes a novel isolated nucleic molecule (I) comprising the genome of bacteriophage RM 378. The invention also describes (1) an isolated nucleic acid which encodes a polypeptide obtainable from bacteriophage RM 378 or its active derivative or fragment; (2) an isolated bacteriophage RM 378 (II); (3) a DNA construct (III) comprising operatively linked to a regulatory sequence; (4) a host cell comprising (III); and (5) an isolated polypeptide (IV) obtainable from (II), its active derivative or fragment. Bacteriophage RM 378 is useful for

Isolated nucleic acid from bacteriophage RM 378 encoding enzymes useful in recombinant DNA technology -

WPI; 2001-061727/07.

Claim 3; Fig 1A-1Q2; 138pp; English.

Aevarsson A;

Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ Mycobacterium tuberculosis; strain H37Rv; strain CDC 1551; genome; variation; epidemiology; patient treatment; epidemic monitoring; ds. 458 CAGTACCATACCAAACGCTTCATTTTCCGAAGGCATGACCACCACACTGGC 508 Mycobacterium tuberculosis strain H37Rv genome SEQ ID NO 2. ```
nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic monitoring. Wote: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID-6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pyrococcus abyssi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Forterre P,

abyssi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41226. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to NAFP. The contract of the present invention have the proteins of the proteins are stable at very high temperatures, some up to NAFP. The contract of the proteins are stable at very high temperatures.

The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression as agenomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ARQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            325 CGCGCAGTGCGCCGGTCCATGCAGACACATCCCCCACGGGTAACAGCGTCCCTGTCACAT 384

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  abysi and P. abyssi proteins (see AAB96053-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal worts. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAM41225 and the 3' end of this sequence overlaps with the 5' end of AAM41227. The proteins of the present invention have various potential industrial uses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 333 GCGCCGGTCCATGCAGACACATCCCCCACGGGTAACAGCGTCCCTGTCACATTCTTCTGA 392

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                        The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in coher Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus close described by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells. The method is useful for monitoring new genes in one or more second Bacillus cells. The method is useful for monitoring genes or more second Bacillus cells. The method is useful for monitoring new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, environmental stress or other physiological provocation. Extensive equals one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 AAAGTAGGCCTGTTCTGTCCGGTATTTAAATGCATTGACCGTCCCCGTATTTAAACAATG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of a degenerate DNA sequence that encompasses all DNAs encoding zalphall (see AAY79312), a novel human class I cytokine receptor that may be involved in an apoptotic cellular pathway, or is a cell-cell signalling molecule, growth factor receptor, or extracellular matrix associated protein with growth factor hormone activity. The degenerate sequence serves as a template for optimizing expression of polynucleotides in various cell types and hosts. The invention provides zalphall polypeptides, polynucleotides (see also AAZ94533), agonists, annagonists and antibodies, and methods for their use in the treatment and diagnosis of conditions associated with altered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3.1%; Score 36.6; DB 21; Length 1614; 30.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated soluble zalphall cytokine receptor inhibiting or antigonising the ligand activity-induced proliferation of nantipoliting or antigonising the ligand activity-induced proliferation of haematopoletic cells and haematopoletic cell progenitors preferably calpha is useful for treating immune and inflammatory disorders, for reducing proliferation of neoplastic B or T cells, for suppressing an immune response in a mammal exposed to an antigen or pathogen. Zalpha is useful for treating diseases that require immune regulation including autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, myasthenia gravis, systemic lupus erythematosus (SLE) and dlabetes; espis, viral infection (dengue virus infection) and cancer. The present sequence is human soluble Zalphall cytokine receptor CDNA degenerate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1002

                                                                                                                                                                                                                                                                                                             Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            503 TAAAATGTACAGGCCACTTGTACAGAGCTCATGATGACAGTGAATTGAACACTCATTGTC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                503 TAAAATGTACAGGCCACTTGTACAGAGCTCATGATGACAGTGAATTGAACACTCATTGTC 444

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for prodicting a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                        to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human soluble Zalphall cytokine receptor variant degenerate cDNA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to an isolated soluble zalphall cytokine receptor polypeptide and their cDNA molecules. Zalpha proteins are useful for inhibiting or antagonising the ligand activity induced proliferation of heematopoietic cells and haematopoietic cell progenitors preferably imphoid cells which are natural killer cells or cytotoxic T cells. Zalpha is useful for treating immune and inflammatory disorders, for reducing proliferation of neoplastic B or T cells, for suppressing an immune response in a mammal exposed to an antigen or pathogen. Zalpha is useful for treating diseases that require immune requiation including autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, myasthenia gravis, systemic lupus erythematosus (SIE) and diabetes; sathum, ulocarative colitis, inflammatory bowel disease, copinis, viral infection (dengue virus infection) and cancer. The present sequence is human soluble Zalphall cytokine receptor variant cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1073 TCGAAGTCTGAGGATGGAAGGAAGGTGAAGGCTGTTCCTGAAAGGAATAAAAGTGACATC 1132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel DNA array giving a representation of a mumber of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       274 CTCTGGCGCTGGCTGCCATCATCCGGAAGCGTTCCGGTCGGGATAAAAATCGCGCAGTG 333

The present sequence is named by contine treeperson and the present sequences translational DNAD. DCRS3 gene is located on the present sequences translational DNAD. DCRS3 gene is located on the promosome lepi2. Cytokine receptors, fragments and antibodies are useful for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are useful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful compulating the physiology or development of a cell or tissue culture cells. A purified DCRS is useful as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to production of antibody to the endogenous receptor. Cytokine receptor sequences are useful as probes of detecting a levels of the cytokine receptor in patients suspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idiotypic antibodies and for detecting or diagnosing various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGTTTTTTGTCTGACAATAGTGAAGCGGTGACAGCATATCAGACGGCTCAGTCCTGCTAT 1012

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                       cancer; cytostatic; carcinogen; pharmacodyanamic marker; marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits of cellulose synthesic equipment, that can be used to increase the amount of cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a method of monitoring differential expression of genes in a first Bacillus cells, comprising hybridising labelled nucleic acid probes to ther Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genomic sequenced tags (GST), examining the array, and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells. The method is useful for monitoring global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions,

                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
environmental stress or other physiological provocation. Extensive follow-up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information available. This sequence represents a genomic sequence tag (GST) used the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Yeast and fungal nucleic acids encoding proteins involved in a pathway

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oilgomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques
                                                                                       The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemta and neurodegeneration. The present sequence is one of the S. cerevisiae coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                           programmed cell death, useful for treating proliferative yeast and fungal infections, or for preventing apoptosis in
                                                                                                                                                                                                                                                                                                                                                                                                              ACGCCGGAGACTGACGCTTCAGCCAGTACCATACCAAACGCTTCATTTTCCGAAGG 490

to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics forensics, gene mapping, identification of mutations capposable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human cold sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the

specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer (f) assessing the prostate cell carcinogenic potential of a compound:
(g) determining whether prostate cancer has meracine.
(h) assessing the accreance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      misc_difference 3630

(ABB14678-ABB18001) useful for preventing, treating or ameliorating (ABB14678-ABB18001) useful for preventing, treating or ameliorating conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune contins, (c) cardovascular disorders such as myocardial ischaemias; (c) cardovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and eparasitic infections diseases such as viral, bacterial, fungal and marsatite infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 525 AACGCTGGGAAAAGGGCACCTGCCATTAACACATCTCCGCTCATTCCCAGGTGTTCTGTC 584
                                                                                                                                                                                                                                               Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oute: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.
                                                                                                                                                                                                                                                                                                                                              The invention relates to novel genes (ABA11004-ABA21534) and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human immune/haematopoietic antigen genomic sequence SEQ ID NO:30388

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
csupplement the patients own production of (I). Additionally, (I)
coplynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoletic-related diseases, especially
cancers and cancer metastases of haematopoletic-derived cells. AAK64703
copenses and cancer metastases of haematopoletic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       525 AACGCTGGGAAAAGGGCACCTGCCATTAACACTCTCCGCTCATTCCCAGGTGTTCTGTC 584
                 Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                   The present sequence is human DNAX cytokine receptor subunit 3.2

(DCRS3.2) reverse translational DNA. DCRS3 gene is located on chromosome leppla. Cytokine receptors, fragments and antibodies are useful for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) cor fragments are useful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful for modulating the physiology or development of a cell or tissue culture cells. A purified DCRS is useful as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to production of antibody to the endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients uspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idiotypic antibodies and for detecting or diagnoshiny various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                   ö

```
The present sequence encodes a sucrose biosynthesis polypeptide which has a sucrose phosphate synthase-like (SPS-like) activity. The SPS-like polypeptide does not utilize UDP-glucose as a sole glucosyl donor substrate. Probes and amplification primers based on the SPS-like polynucleotide can be used to isolate or detect nucleic acid molecules which encode a protein with SPS-like activity. The SPS-like polynucleotide can be used to alter the level sucrose or sucrose phosphates in a plant cell, tissue, or organ or a higher plant, especially tobacco or rice. The SPS-like polynucleotide can also be used to alter the carbon partitioning, development and/or growth response of a plant, increase the level of UDP-, ADP- or CDP-glucose-dependent sucrose-6'-phosphate synthesis, and to produce sucrose-6'-phosphate from a nucleoside diphosphate glucose other than UDP-glucose in a plant cell. Recombinant SPS-like activity expressed in E. coll shows a broader specificity than the higher plant SPS increase as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1169 CCATTCTGACAATTTTGATAATATCCACCGGCCCCCATCCTCCGTGGCCACAATGGGC 1110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                                Propionibacterium acressimminogenic polypeptides. The proteins and their associated by a sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acres. The disorders include SAPHO syndrome (synovitis, acre, pustulosis, hypertosis and categories of medical conditions caused by P. acres. The disorders include SAPHO syndrome (synovitis, acre, pustulosis, hypertosis and categories of properties of the categories. P. acres is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acre vulgaris. A method for detecting the presence or absence of P. acres in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigonis and protein of antibodies specific for P. acres proteins. These antibodies can be used to downregulate expression and activity of P. acres polypeptides and determining P. acres infections. The antibodies spoil in ANU49156-AANU9883 and AANU5752-AANU5753.

Categories shown in AAU49156-AANU9883 and AANU5752-AANU5753.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed in the lactronic format directly from WIPO at the printed in the patient as a for the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           54049 GCAATAACGTCACCACGGGGGACGATCAAGCCGGTAACACCATCCTCGACGACCTCTGGC 53990

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in coher Bacillus cells. Comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells to expression of the same genes to one or more second Bacillus cells. The method is useful for monitoring genes in one or more second Bacillus cells. The method is useful for monitoring genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions.

The whole bacillus cells adapt to changes in culture conditions, convironmental stress or other physiological provocation. Extensive equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oilgo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                     expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          199 TCCCCTTAGCCTGACTAGCCAGAGACACAATGATCTGTGCCGTTCTGTTAATATCAAACC

AMANASIA TO AMANASIA. GARAGUE LIRE NUMBER NUMBER OF AMANASIA CANDERS AND AND AND AMANASIA. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) complement the patients own production of (1), Additionally, (1) complement the patients own production of (1), by inserting the call in a patient of protein and polynucleotides may be used to produce the secreted (1), by inserting concern and activity and polynucleotides may be used to prevent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                       their polynucleotides. The phosphatase proteins are related to the protein tyrosine phosphatase subfamily. The peptides of the invention are useful for identifying a modulator of phosphatase peptide expression. Modulators of phosphatase peptide are useful for treating diseases or conditions mediated by a human phosphatase protein. The phosphatase gene of the present invention can be expressed in yeast to identify possible interactors and substrates. Artificially synthesised enzymes or derived by this phosphatase. The present sequence is a human gene encoding phosphatase protein. This gene is located on human chromosome 14.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and conting sequences of the invention.

Continuous and acquences of the invention of mutations changed and products dependent on but and adaptostic coding sequences of the invention to several plant of the printed conting sequences of the invention of contactly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
cartivity, and can be used in gene therapy and vaccine production. (I)
cartivity, and can be used in gene therapy and vaccine production. (I)
proteins and polypuclectides may be used in the prevention, diagnosis and
cexample, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
polynuclectides may be used to product the secreted (I), by inserting
colynuclectides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
concers and cancer metastases of haematopoletic-related diseases, especially
cancers and cancer metastases of haematopoletic antigen genomic
concers from the present human immune/mematopoletic antigen genomic
sequences from the present humaniammune/mamatopoletic antigen genomic
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            141 GGAAAACCGCTGAACAAAATTCGGGCTGAAAAGAGGATCCGCCGTTATCTGTTGCATTTC 200

                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                               The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                             (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                     7 GAGATGGAAAAAAAGCCAAAATAAAAATTGCCCATCCCAGCGCGCTCCAGCTGAAAGTA 66
                                                                       Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

    (c) assessing the efficacy of a test compound to inhibit prostate
cancer in a patient;
    (d) assessing the efficacy of a therapy for inhibiting prostate cancer
in a patient;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      67 GGCCTGTTCTGTCCGGTATTTAAATGCATTGACCGTCCCCGTATTTAAACAATGTGA 123

The specification includes two different sequences which are the specification includes two different sequences which are the specification includes the stage AAQ21620). They are identical through the first 741 nucleotides of AAQ21620 before the much longer sequence AAQ21621 begins to diverge. The human TDO2 gene sequence, including regulatory sequences, is also given in the specification, as is a genomic TDO2 sequence which includes the introns (see AAQ2162) and AAQ21624, respectively). The sequence of the open reading frame in these sequences defices from AAQ21620) by the deletion of a single adenine residue (i.e. from the run of 8 A's at position 713-720 of AAQ21621). Yet another Figure, which illustrates the asingle of homology between HTO3 and the rat TDO2 sequence, also lacks the 8th Adenine, suggesting that the "extra" A in both AAQ21620 and AAQ21621 represents a typographical error. The patent specification does not contain any discussion of the apparent differences and includes only the minimum description of each of the sequences. Consequently, the significance of an in frame contains the longest CDS of HTO3 is not known.

Ogihara under late flowering" / dev_stage="spikelet at late flowering" / dev_stage="spikelet at late flowering" / dev_stage="spikelet" / close flowering is it=2: xhoi; Plants were grown under hydroponic conditions at UC Davis, salt stressed for 12 hours, and for 7 days, then dissected and frozen (Akhunov in J Dovorak Lab). Total RNA was prepared from sheath tissue, equal quantities of RNA were pooled from the two samples, polyA was purified from the pooled from the two samples, polyA was purified from the pooled from the tissue, equal quantities of RNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab at the University of California, Riverside (Akhunov, Chin Choi, Close, Fenton, Kianian, Otto, Simons, Zhang). plasmid DNA preparations and DNA sequencing were performed in the OB Anderson lab (all other authors)."
